

Get front line protection for your drain systems with...

United 268 **FRONT LINE** F.O.G. Control

Using **FRONT LINE** adds natural protection to your entire drain system by feeding the drain lines at a point before the problems begin. This protection is then carried all the way through to the wastewater lines at the street level.

FRONT LINE is a solid blend of specifically selected strains of bacteria that provide superior degradation of organic wastes and F.O.G (fat, oil, and grease). This system will naturally and safely reduce the organic waste build-up and F.O.G. accumulations throughout the downstream lines. The bacteria are present in high numbers (4 billion CFU) to bio-degrade organic problems in your lines and prevent new ones from building up.

FRONT LINE F.O.G. Control...

- Saves money by reducing costly maintenance.
- Provides 24-hour, continuous treatment of organic wastes and F.O.G.
- Provides extended protection as it dissolves over a period of 60 – 120 days, depending on water flow.
- Contains specifically blended bacteria that target organic waste and F.O.G.
- Is easy-to-use and color-coded to indicate when replacement is needed.
- Significantly reduces malodors.
- Is extremely cost effective.
- Is safe for pipes and plumbing.
- Is Earth Smart® certified.

Use FRONT LINE for F.O.G. control in...

- Holding Tanks
- Sump Pits
- Septic Tanks
- Multi-residential Buildings
