

UNITED 382 BEE SAFE

BIOBASED CRAWLING INSECT SPRAY IS DESIGNED TO...

- Be safe for you.
- Be safe for the environment.
- Be safe for beneficial insects like the bumblebee.

Why worry about the bumblebees?

Over the past couple of years bumblebee populations have been steadily declining around the world and bee keepers are finding many unhealthy hives. This greatly impacts the much needed pollination of crops that we all depend on to put food on our tables. Pesticides are believed to be the primary cause of this serious decline.

BEE SAFE is a Responsible Innovation™ that is Earth Smart® and biobased. It is formulated from essential botanical oils that work together naturally to kill crawling insects. This formulation works to quickly affect the nervous system of these pests, while suffocating and dehydrating them for a quick kill.

BEE SAFE effectively controls:

- Ants
- Beetles
- Centipedes
- Cockroaches
- Crickets
- Earwigs
- Fleas
- Silverfish
- Spiders
- Termites
- Ticks and more.

LABORATORIES
Proud to be employee-owned

BEE SAFE provides quick kill on contact as well as residual protection.

Spray directly on pests and apply in cracks and crevices where they may live and hide.

BEE SAFE qualifies for exemption from EPA registration under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA).

BEE SAFE is the insecticide of choice to help keep you safe from crawling insects, while also protecting you and the environment from more commonly used insecticides that may have harmful effects.
