

Improve indoor air quality, while removing odors with...

# United 335 **FRESH AIR™** Air Handler Deodorizer

This product features United's Fresh Air™ Technology to effectively eliminate bad odors from air handling/air conditioning systems and improve indoor air quality as it is circulated throughout the facility.

**FRESH AIR™ Air Handler Deodorizer** provides the aromatherapy benefits of peppermint oil, which has long been used to temporarily relieve headaches and tension, increase alertness, and energize.

### **FRESH AIR™ Air Handler Deodorizer:**

- Bio-based and fully biodegradable.
- Earth Smart® Certified.
- Deodorizes while dispersing fresh peppermint fragrance.

### **Available in two sizes:**

- 2 pound block will deodorize a 15 ton system for 5 – 6 weeks.
- 8 pound block will last for up to 12 weeks.
- These two sizes accommodate placement in several areas of the system.

Place blocks in air handlers or air conditioners at points where air is pushed out through the system. Place in drip pans and other ductwork throughout the facility for maximum effect.

### **Easy-to-use:**

Simply remove the lid of the product container and then loosely hold the lid to the top of the container while turning it upside down to allow the block to slide out and sit on the lid. Place the lid with the product where desired throughout the air handling system.

If you've ever had complaints about the air coming from your system smelling stale, you can eliminate the complaints and freshen the air with **FRESH AIR™ Air Handler Deodorizer**.
